

Description

- Open hose reel for air, water (high or low pressure), oil or grease, depending on model.
- Uncoil the hose to the desired length. It can be locked by means of the latch mechanism.
- By gently pulling the hose, the latch is released and the hose is automatically recoiled.

WARNING: High pressure device for professional use only. Keep body clear of nozzle and hose. Serious injury could occur. Do not exceed max. W.P. or lowest rated system component. Disconnect air and release pressure in the system before servicing.

Installation:

1. Wall or ceiling mounted hose reel, directly or by using a pivoting bracket (Ref. 360 111) or a special bracket for installing several hose reels. (Ref. 360 115, 360 117, 360 118) (Fig. A).
2. For smooth operation and longer life, position reel mounting brackets as per figure B. This way, the hose is always pulled tangentially to the hose reel.
3. To move the hose guide arm and the hose outlet mouth, remove screws I (Fig. B), place arm and outlet in correct position and replace screws.

Fig.A

Fig.B

Hose Replacement

WARNING: Before removing the damaged hose, close the nearest shut off valve to the reel and open the fluid control gun to release the pressure inside the hose.

1. Dismounting the reel from its position is not required!
2. Using a 12mm Allen Key firmly hold the central shaft while removing the spring fastening screws (Fig. C). Using the wrench, allow the spring to gently turn counter clockwise, until the spring tension is fully released (Fig. F).
3. Uncoil the old hose and remove it from the reel. Remove the hose stopper.
4. Connect the new hose as indicated in Fig. E. Fix the hose stopper at the desired length.
5. Manually coil the hose until the hose stopper touches the roller bracket assembly.
6. Turn the key clockwise three or four times to obtain initial spring tension (Fig. D).
7. Holding the key firmly, replace the screws removed in step 1 (Fig. C).
8. Once the service gun is installed, verify that the spring tension is adequate. If not, proceed as indicated in steps 1, 5 and 6.

Fig. C/F

Hose Stopper Adjustment

1. To position the hose stopper at the appropriate length, uncoil the hose and latch it at the closest latching position.
2. Loosen the hose stopper and place it at the required position.

WARNING: Check that the reel is perfectly latched before removing the hose stopper.

Fig. D

Spring Load Adjustment

Hose reels are supplied with a factory adjusted spring tension, depending on the hose installed. Reels without hose bear no spring tension. If the spring tension is to be adjusted afterwards, verify that the required hose length can be pulled out without stretching the spring to the limit. Minimum spring tension increases spring life.

PROCEDURE (See Figs. F & G).

1. With a fully coiled hose, remove the lateral support screw with an Allen key 4mm, insert a 12mm Allen key in the central shaft and hold it firmly. Remove the 4 spring fastening screws (Fig. F).
2. To increase spring load, turn wrench clockwise (Fig. G). To reduce spring load, turn wrench counterclockwise.
3. Firmly holding Allen key, replace the spring fastening screws. Replace the lateral support screw, without screwing it in completely, securing it with nut locker.

Latch Replacement

1. To replace the latch, the hose reel should be dismantled from its position.
2. Release the spring tension as indicated in the hose replacement section.
3. Remove hose guide arms, by removing screws (I) which hold it to the base arms (Fig. H).
4. Remove the reel from the arms (Fig. I).
5. The latch mechanism and the spring can now be reached and replaced (Fig. J).
6. To assemble, follow these steps in the opposite direction.

Fig. H

Fig. I

Fig. J

Swivel Replacement

WARNING: Before removing the old swivel, close the nearest shut off valve to the reel and open the fluid control gun to release the pressure inside the hose.

1. With a completely coiled hose (I), remove the fluid inlet hose (II) and the old swivel (Fig. K).
2. Replace with a new swivel. Insert the O-ring (grease swivel) or the V-seal (rest of applications) prior to assembling the swivel body, as per drawing (Fig. L). Slightly lubricate with grease the O-ring or the seal before inserting it.
3. To fasten the swivel, hold the reel spool while you tighten it (Fig. E).
4. Connect the inlet hose.
