

PRODUCT INFORMATION

May 2016 Update

374010 Piusi 240V Petrol Transfer Kit

The 374010 Piusi 240V petrol transfer kit has been designed and engineered to effectively and safely transfer flammable liquids such as petrol varieties ULP, PULP, E10 and aviation gas (Avgas), is also suitable for the transfer of diesel and kerosene and is IECEx and ATEX approved.

Easily connected to drums via a quick 2" coupling the 374010 refuelling kit features fully-flanged components that can be fitted or replaced without the use of sealing paste making the connections quick and safe.

The 374010 Piusi 240V petrol transfer kit is explosion proof however it is recommended that when used in potentially explosive atmospheric conditions, installation should be performed by a qualified electrician in order to avoid or eliminate sources of ignition such as sparks, hot surfaces or static electricity and all sources of combustion able to ignite mixtures such as gas and air, steam and air, dust and air or petrol vapours.

The 374010 is supplied standard with antistatic fuel hose, water captor filter, automatic nozzle and telescopic downtube extendable to a maximum of 1100mm complete with integrated filter.

PRODUCT SPECIFICATIONS, FEATURES AND BENEFITS

- Compact and sturdy construction with cast iron body
- Transfers ULP, E10, diesel, kerosene and avgas - IECx and ATEX approved
- Duty cycle 30mins on - 60mins off
- Automatic nozzle with flow rates of up to 50 L/min
- Inbuilt nozzle holster
- 4m x 3/4" ID antistatic fuel hose
- Fully-flanged components: pump, flow meter & filters easily fitted or replaced
- Thermally protected integrated bypass valve
- Integrated check valve and pressure relief valve
- Anti-noise filter and integrated downtube filter
- 2" coupling connects easily and quickly to fuel drums
- Telescopic downtube extends to 1100mm
- Water captor filter included
- Installation by a qualified electrician recommended
